Repurposed Materials—waste or by-products of operations that can be given a new life - [Repurposedmaterialsinc.com](http://Repurposedmaterialsinc.com)

Thanks to **YOUR** commitment to the 4Rs, we are realizing benefits for our environment, public health, and economy.

Recyclables are created with precious natural resources that still have value. Recapturing materials into valuable raw materials, recycling creates jobs, reduces pollution, extends life of current landfills, saves natural resources and energy, and stimulates the economy through market development and green technology.

With your help, we are diverting more waste from our landfills. Every ton that we put in the landfill represents a missed opportunity to recycle and utilizing resources to their full potential.

**Reduce**—buy what you need

**Reuse**—use materials again and again

**Recycle**—collect materials to be produced into new items

**Rot**—compost landscape & food waste for soil
